### **Designed for Optimal Performance – HIOSSEN Implant’s ETIII NH System Displays Cutting-Edge Implant Technology**

***With Enhanced Functionality and Placement Capabilities, HIOSSEN’s ETIII NH Implant Enables Accurate Treatment Results***

**Fairless Hills, PA (April 1, 2017)** – HIOSSEN Implant, one of the world leaders in implant technology, introduces the ETIII NH Implant. Designed to embody precision, performance, and perfection, this state-of-the-art implant produces impeccable results and combines excellent cell response with robust initial stability to create dependable placement, shortened healing time, and a strong secondary attachment force.

Developed by an experienced R&D team of implant experts, the ETIII NH features the same clinically effective sandblasted, acid-etched (SA) surface but super charged with a unique NANO bio-absorbable apatite and super HYDROPHILIC coating improving osseointegration and decreases the healing period by over 30%. NH's dry super-hydrophilic surface has amazing wettability, significantly increasing blood adhesion, without the need to be suspended in a solution. During the bone remodeling process, the nano apatite coating is absorbed and newly formed bone is integrated into the SA surface. “HIOSSEN continues to strive for excellence in implant innovations,” stated Peter Lee, Special Projects Manager at HIOSSEN. “The ETIII NH exhibits consummate predictability, and durability that differentiates itself from any other implant on the market.”

Additionally, the ETIII NH augments bone-to-implant contact by 39%, resulting in a higher success rate in poor quality bone and preventing necrosis. The implant also ameliorates blood affinity and platelet adhesion by 12%, maximizing the extent of blood contact to implant surface while facilitating a seamless path change to render precise and reliable results with every procedure.

For more information on the ETIII NH Implant and all other HIOSSEN products, please visit [www.hiossen.com](http://www.hiossen.com) or call our inside sales team at 888.678.0001.

### **About HIOSSEN Dental, Inc.**

HIOSSEN, Inc. was established in 2006 as a subsidiary of Osstem Implant, the Asian-Pacific market share leader in implants and one of the top five implant technology companies in the world. Headquartered in Fairless Hills, PA, HIOSSEN produces a wide variety of implants at its state-of-the-art manufacturing facility and exports quality implants to more than 20 different countries in Europe and Asia. HIOSSEN also strives to improve implant quality by monitoring the market and gathering feedback from clinicians. All ideas and opinions are analyzed with rigorous scientific tests and incorporated into the research and development process.
