## HIOSSEN

# K3 Unit Chair

*A design that alleviates stress for both the patient and clinician*

Updating or building an office from the ground up is stressful so it's important to find ways to alleviate that stress by ensuring that your newly purchased equipment is not only affordable, but also dependable in design and efficient and comfortable for both your office and your team. Thus, selection of a dental delivery system is critical in achieving optimal operatory functionality.

Optimized for the dental operatory and designed with the dental team in mind, Hiossen's K3 Unit Chair enables confident and precise treatment as well as ergonomic patient positioning, and keeps everything the practitioner needs within easy reach.

The K3 Chair's advanced technology improves the precision of the procedure for the dentist. The doctor's table is equipped with a 4.3-in, full-color LCD display panel that provides all the information needed at a glance, while a wide table, mouse pad, and chart holder can improve preciseness and efficiency of treatment. The various additional functions for the water-irrigating handpiece, lamp switch, RPM setting, and timer allow the operations to be done in a more stabilized, careful manner. Smart technology ensures a smooth workflow for the dentist and assistant.

Dental assistants will appreciate the K3 Unit Chair's efficient simple use of space as the assistant's unit is designed to provide the most efficient arrangement for consumable and operating tools on the table. The swivel side table can enhance convenience during treatment without disrupting procedural workflow while working on the patient.

The K3 Unit Chair's ideal

comfort and ergonomic design puts patients at ease during their procedure. The patient chair, equipped with a high-performance hydraulic motor, and the unit, fixed to the ground, produce minimal shaking and noise during chair height adjustment. Wide back support also gives the patient comfort in any position and allows the clinician to maintain proper distance with the patient.
