

Digital-guided Implant Surgery with  
Excellent Procedural Accuracy and Convenience

# OneGuide KIT

- Shortened Drilling Protocols for Reduced Chairtime.
- Sophisticated Procedures Possible with Steady and Precise Drilling
- Fast Operation without worrying about Heat Necrosis

**HÖSSEN**  
IMPLANT

# OneGuide KIT

## 1. Initial Drill

- Displaces bone for OneGuide Drills

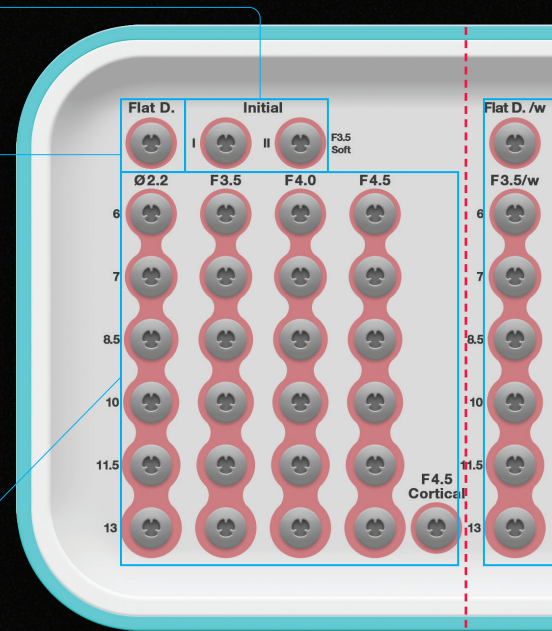

## 2. Flattening Drill

- Used to flatten uneven alveolar ridge
- Drill head is designed with multiple cutting edges

## 3. OneGuide Drill

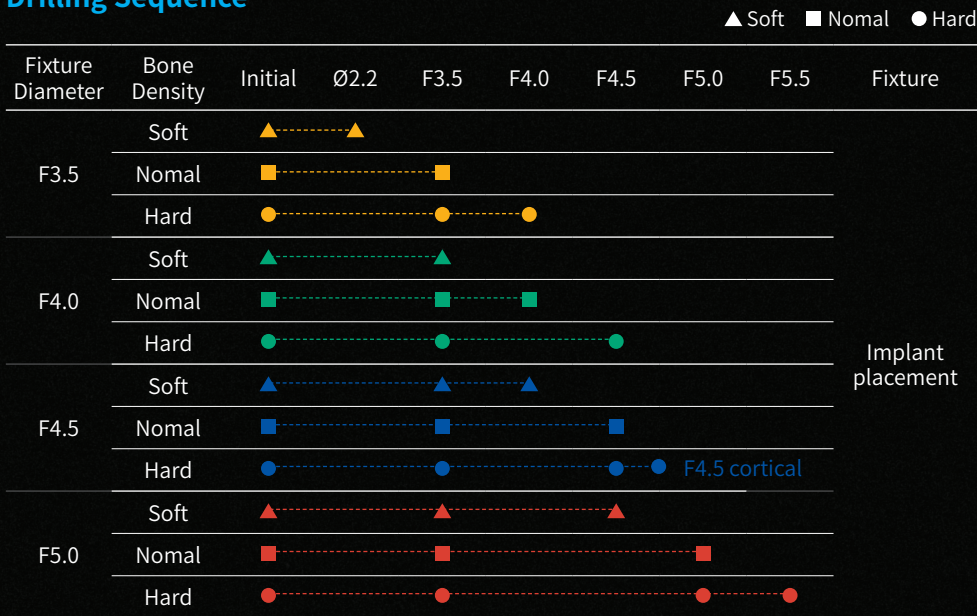

- Drills are optimized for the ETIII system
- Unique drills design reduces heat

IMPLANT

# HROSSEN IMPLANT

## 4. Tissue Punch

- Used for flapless surgery

## 5. NoMount Driver

- The OneGuide system does not require special mounts or delivery methods
- Works only with NoMount Fixtures
- Yellow markings provide hex indexing

## 6. Fixture Driver

- To finish delivery manually
- Yellow markings provide hex indexing

5.0 (Ø5.7 template hole)

1. CT & intra-oral scan
2. CT & stone model

- OneGuide Stent 3D printing
- SmartFit or stock abutment + temp crown

Planning & OneGuide design

Surgery day

## Shorter Drilling Sequence

- Depending on bone quality, implants can be placed after 2-4 drills

ex. ETIII Ø4.0

**HIOSSEN**<sup>®</sup>  
IMPLANT

## Side Slots for Restrictive Spaces

- Open Sleeve/Guide allows for lateral access in limited conditions
- Vertical clearance requirement can be as low as 35mm, while other kits can require 51mm
- The Surgical Stent can be fabricated with or without the Open Sleeve

Insufficient intermaxillary space

Sufficient intermaxillary space

## Stabilized Drilling

- The Surgical Stent provides excellent stabilization of the drills
- After use of the Initial Drill, the osteotomy will provide further stabilization to improve stability and precision

## Reduced Heat Generation

- Improved drill design significantly reduces heat generation during drilling
- Open Sleeves improve irrigation flow into the site

Triple Stage Tip

Side slot allows for full irrigation
