**Guided Implant Solution for Narrow Spaces** 

# OneMS Kit

- Keyless computer-guided surgical kit for narrow implants
- Optimized for cases with horizontal bone loss and in areas with narrow ridges
- Minimally invasive EM surgical procedures shorten healing time

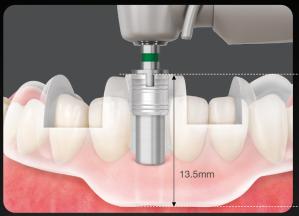

#### Guided Surgery is possible in areas with bone width of only 5mm

- Drilling with the OneMS guide minimizes interference to the adjacent teeth
- Perform Guided Surgeries with the OneMS Ø3.6mm guided stent in narrow areas

Succesful guided surgery can be completed even with a minimum of 5mm of ridge space

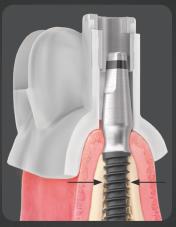

Guide stop enables drilling without interference to adjacent teeth

Guide stop position

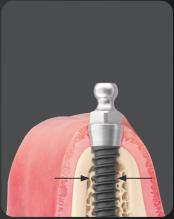

Bone level

### Place the whole system of EM implants in narrow areas

- The EM system is a one-body implant designed for narrow interdental areas and denture prostheses for edentulous patients
- Place EM Narrow Ridge in narrow ridged areas, such as the anterior region (Ø2.0 / Ø2.5 / Ø3.0)
- Place EM Denture for implant overdentures in areas where standard implants are not achievable (Ø2.0 / Ø2.5 / Ø3.0)

Place EM Narrow Ridge Ø2.5

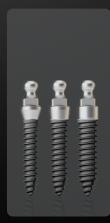

Place EM Denture Ø2.5

### ETIII Ø3.2 Implant (Narrow diameter implant) placement with OneMS Kit

- Use OneMS KIT where the standard OneGuide Kit cannot be used due to narrow bone width
- Use ETIII Ø3.2 when path compensation of prosthesis is needed in narrow areas

**EM Narrow ridge** 

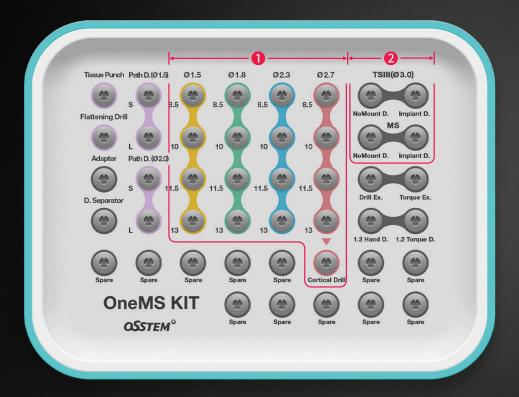

**EM Denture** 

ETIII Ø3.2

## **OneMS Kit Layout**

- 1 OneMS Drill (1,200rpm)
- Straight drill
- Start with 8.5mm drill regardless of Implant length
- Cortical Drill is used for ETIII Ø3.2 implant

### NoMount & Implant Driver

- EM Narrow Ridge/ETIII Ø3.2
- Tools for EM denture must be purchased separately

#### Other Tools

**Torque Wrench** 

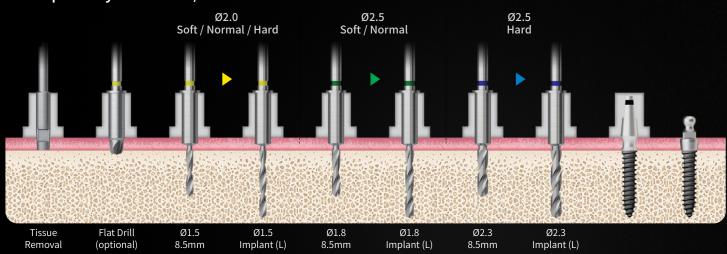

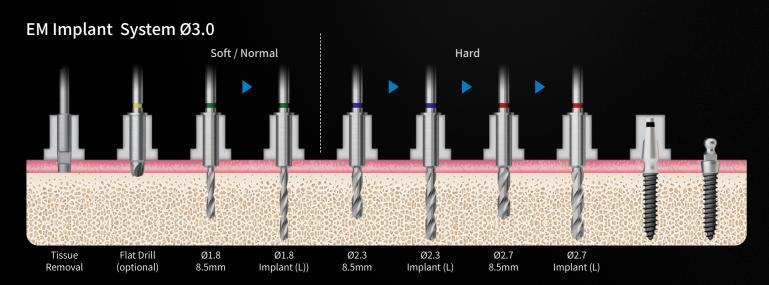

#### **Depth Gauge**

## **OneMS Drilling Sequence**

#### EM Implant System Ø2.0 / Ø2.5

#### ETIII Implant System Ø3.2
