Hiossen Dental Implant

Smiles that last a lifetime

What is a Dental Implant?

Dental implants are placed into the gums and have a shape similar to a screw. They go into your jawbone and bond with the natural bone that is in place, providing an attachment point for the crown. A crown is an artificial tooth designed to blend in seamlessly with your existing teeth.

Dedicated to excellence. Dedicated to your smile.

It is a permanent implant in your mouth that has excellent long-term success.

It also provides more advanced options for replacing a missing tooth than a conventional removable partial denture or fixed bridge.

It helps to preserve healthy teeth and eliminate the risk of dental decay

Benefits of an Implant

Eat, talk, laugh & restore your confidence

- Replaces one or more teeth without affecting adjacent teeth
- A long-lasting and reliable solution
- Eliminates the risk of dental decay
- Makes you feel confident with your new smile
- Prevent premature aging and facial sagging
- Implants look and function more like your natural teeth

Post Op Instructions for Dental Implants

Bleeding

Bite down on a sterile gauze for 2 hours. It is advised to swallow the blood and saliva.

Swelling

Use an ice pack on swollen area for 5 minute intervals.

Prescription drugs

To relieve pain and avoid infections, please take the drugs prescribed by your dentist.

Meals

Avoid solid food and the use of straws for 1 week.

Exercise and Leisure

Please avoid rigorous activities and saunas for 2~3 days after surgery.

Drinking and/or smoking

Please avoid drinking and/or smoking for at least 1 month to prevent infections.

Proper Oral Hygiene

Use of proper brushing techniques and anti-bacterial mouthwash every day can further prevent infection.
